Conservation in Action

WHO WE ARE

California Landscape
Conservation
Cooperative

The California LCC supports diverse and thriving ecosystems through lasting cooperative conservation partnerships. The California LCC partnership focuses on incorporation of [climate-smart](#) conservation strategies into natural resource management.

How We're Funded

The CA LCC is staffed by the US Fish & Wildlife Service, US Geological Survey, and Point Blue Conservation Science. Projects are funded by the Department of the Interior and the network of partners equally.

IN OUR PARTNERS' WORDS

"Sometimes nature is big, and crosses our human boundaries. Climate change is such a phenomenon. In response,

we need to think big, and work together across those boundaries. The LCC is a place where that can happen."

— Mark Kramer, Director of External Affairs,
California Program, The Nature Conservancy

KEY PARTNERS

SCIENCE-DRIVEN RESULTS

Where We've Been, Where We're Going

Since beginning in 2010, the CA LCC has supported over 30 projects that with partner contributions have brought over \$10 million to developing science-based climate adaptation strategies for natural resource managers in the CA LCC geography.

In the future, the CA LCC will work to fulfill its vision of a California that supports diverse and thriving ecosystems by leading and funding climate-smart projects, strengthening partnerships, and providing accessible climate change resources. As outlined in the 5-year [Science-Management Framework](#), the major objectives of the CA LCC are to support:

- » **Place-Based** Projects which demonstrate climate-smart conservation in a specific geographic location.
- » Projects which address climate change impacts to priority **Ecosystem Processes**.
- » **Landscape Conservation Designs** which are partnership driven conservation strategies that identify actions for cooperatively obtaining desired future conditions at multiple scales.
